Net Asset Value of HUF series:	34,648,056,209 HUF
Net Asset Value per unit:	2.405243 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Equity markets kept rising in November fuelled by further stimulus announcements in Europe and the tumbling energy prices. Oil prices nosedived by almost 20% in November on supply-demand imbalances as the OPEC did not change its production quota regardless of the mounting pressures on oil prices. Industrial metals also took a hit in sync with falling energy prices, while global equity markets were supported by the lower commodity price environment. European indices posted particularly strong performances throughout November -with the DAX leading the rally just a few points shy of its all-time high- as the ECB went on with announcing a further set of stimulus. Even though the S&P500 performed behind most of the European indices, it managed to hit all-time record highs in November amid the risk-on environment. During November the HUF strengthened and the fund increased its position against the HUF. We exploited the yield decrease through increasing the position in corporate bonds. Regarding the equity portfolio we saw opportunity in Japanese, Chinese and Turkish shares as weakening oil price have a positive effect on these shares. We bore a loss on the tactical purchase of Russian equities, however, we bought just a small amount.
