Total Net Asset Value of the whole Fund:	1,792,859,615 HUF
Net Asset Value of HUF series:	1,792,859,615 HUF
Net Asset Value per unit:	1.839075 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

## MARKET SUMMARY:

Developed market bonds posted an outstanding month once again in November. The 10-year Gilts managed to decrease 32 basispoints in yield, while 10-year US treasuries rallied by 17 basispoints and German Bunds decreased by 14 basispoints throughout the month. The good sentiment was mainly sparked by the Bank of Japan, which increased the amount of its quantitative easing from an annual JPY 60-70 trillion to JPY 80 trillion. As the ECB is at the front door of an American-type quantitative easing and the Bank of Japan just increased its pool, the investors perceive the potential and ongoing stimuli as unorthodox measures that can fully or partly replace the easy monetary policy of the Fed if the central bank decides to withdraw its measures. At the beginning of the month we increased our exposure in British government bonds and decreased our position in French sovereign papers.
