Net Asset Value of HUF series:	1,896,720,628 HUF
Net Asset Value per unit:	1.913686 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

  high
  very high

## MARKET SUMMARY:

December has brought no change in terms of the downward sliding of the oil prices. The prices of the energy source have fallen by a remarkable 25%. As the sanctioned-hit, oil-exporter Russia is facing huge economic challenges (expected fall in real GDP around 4.5% in 2015), its currency deteriorated significantly in the first half of December. In order to maintain the stability of the Rubel, the Central Bank of Russia increased its key policy rate to 17% by a 650 basispoints increase, which was just enough to trigger a huge havoc after a short lived relief on the Rubel's market. The panic has quickly shifted to other capital markets as well and the supposedly calm weeks before Christmas have quickly turned into nightmare on the markets. While the US economy is still performing well, the Fed is on the verge of hiking rates, the possibility of a European QE is increasing. In accordance with that European core sovereign bonds performed better than their American counterparts. The US 10 -year bond finished 2014's last month with a 5 basispoint yield-decrease, while European sovereign bond yields have sank by 15-25 basispoints. We have sold the mid-long part of the US government bond curve and created a barbell position with buying short- and ultra-long bonds. We have also increased our Irish exposure.

## ASSET ALLOCATION OF THE FUND ON 12/31/2014
