Net Asset Value of HUF series:	1,426,642,516 HUF
Net Asset Value per unit:	1.429385 HUF

INVESTMENT POLICY OF THE FUND:

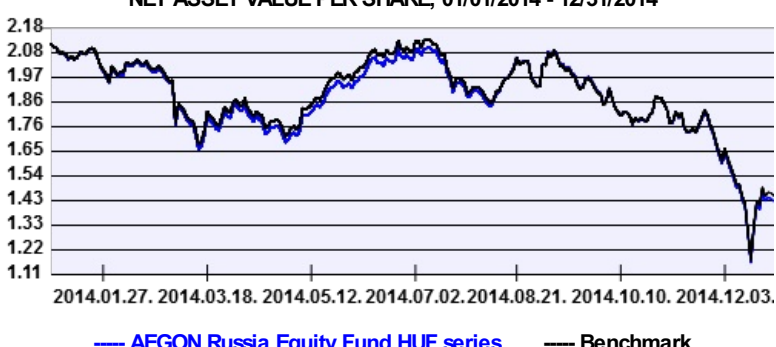

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 35.20 %
Annualized standard deviation of the benchmark's weekly yields: 35.41 %

MARKET SUMMARY:

Equities remained volatile throughout December as markets sold off on tumbling commodity prices and emerging currency concerns followed by a bounce back in the second half of the month. With no quick remedy for the supply glut oil prices remained under pressure regardless of the depressed price levels. China once again staged a huge rally with the Shanghai Composite appreciating by 20% in December driven by momentum trade and the benign effects of the lower commodity price environment. European stimulus expectations and the unfolding Greek political turmoil drove the EUR to multi-year lows against the USD, while US equity markets managed to outperform European indices.

The plunge in oil prices put further pressure on the Russian economy. Ruble fell to all-time low in December and not even the central bank's significant rate hike could stop the plunge.
