Net Asset Value of R series:	4,129,345,458 HUF
Net Asset Value per unit:	1.172929 HUF

### INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

### MARKET SUMMARY:

Major equity markets performed mixed in January. European indices soared to new all-time highs, boosted by a set of ECB stimuluses, while US markets did not manage to appreciate further. Investors focused on sharp FX moves as the EUR kept tumbling to fresh lows against the USD, while the enormous appreciation of CHF induced market turbulences. The relative outperformance of European equities vs. US markets was boosted by a benign set of growth contribution stemming from the weak Euro, the ECB stimulus and the lower oil price environment. On the other hand, US corporate earnings revisions were affected by both adverse FX effects and oil related downward revisions. Oil prices remained volatile throughout January as the selling spree lost momentum with the early signs of a massive downscale in drilling activity. The fund benefitted from the bond rally. Gold long position helped in lowering the volatility and contributed to the good performance. Active equity positions also contributed to the performance.
