Net Asset Value of EUR series:	632,335 EUR
Net Asset Value per unit:	0.990742 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

MARKET SUMMARY:

It was an eventful start to the year for markets with the ECB's QE decision, the Greek election, a surprise policy move by the SNB, and the further weakness in Oil being just some of the key headlines that dominated the month. Asset performance was a mixed bag partly distorted by the large moves in FX markets. Fixed income had a good month generally across the board with Treasuries, Bunds, and Gilts up +3.0%, +2.2% and +4.9% respectively. Emerging market bonds have seen better start of a year as sovereign spreads have widened by 53 basispoints with bonds of net-oil exporter countries leading the way. Looking at the index without these countries, the performance is moderated a bit, but it still shows widening by a small margin.

ASSET ALLOCATION OF THE FUND ON 01/31/2015
