INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, very low-risk investment vehicle, but to offer investors better returns than bank deposits. The portfolio elements are selected in accordance with these principles. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills distributed by the State Debt Management Centre (ÁKK), and bonds issued by the National Bank of Hungary. The average duration of the assets in the portfolio is 6 months, and the average remaining life of the assets may not exceed 12 months. The fund is low-risk, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. In the case of floating rate, forint denominated debt securities the average duration is equal to the number of days remaining until the next interest payment day. The fund may also invest its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Money Market Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

On 24th February, the NBH left the base rate at 2,1%, in line with our and market economists consensus expectations. However, market pricing has shifted towards a more dovish interest rate outlook: rate cut(s) can't be ruled out at all, but the first step may happen as early as March with the new Inflation Report. The statement was more dovish than last time, so parallel with the changes on global capital markets, the probability of a potential new rate cut cycle has increased. Domestic money market yields are almost unchanged throughout the month. In response to the increased probability of further monetary easing, we increased cautiously the duration in our Fund.
