Net Asset Value of R series:	4,210,663,209 HUF
Net Asset Value per unit:	1.181773 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

Equity indices traded near all-time high levels throughout March. Regardless of the stalling Greek debt talks, European markets once again registered strong performances. The risk-on environment was boosted by benign earnings revisions stemming from low oil prices, the weakening of the EUR and supportive monetary conditions with the ECB expanding its bond purchase program. US equities, on the other hand, lagged behind European ones as corporate earnings trajectories were negatively affected by adverse FX effects and oil related downward revisions. Oil prices remained volatile in March as a massive downscale in US drilling activity acted as a mid-term supportive factor, however, WTI remained under pressure on storage capacity concerns.

The fund rose its equity exposure mainly through the European banking sector, the Chinese H-shares and the regional equities. The market is not cheap in itself, but we focus on regional companies, which have attractive valuation and positioning. We have remained optimistic against the USD.

ASSET ALLOCATION OF THE FUND ON 03/31/2015
