 Start: 05/11/2007
 Currency: HUF
 Total Net Asset Value of the whole Fund: 2,199,412,166 HUF
 Net Asset Value of HUF series: 2,145,472,511 HUF
 Net Asset Value per unit: 1.545979 HUF

INVESTMENT POLICY OF THE FUND:

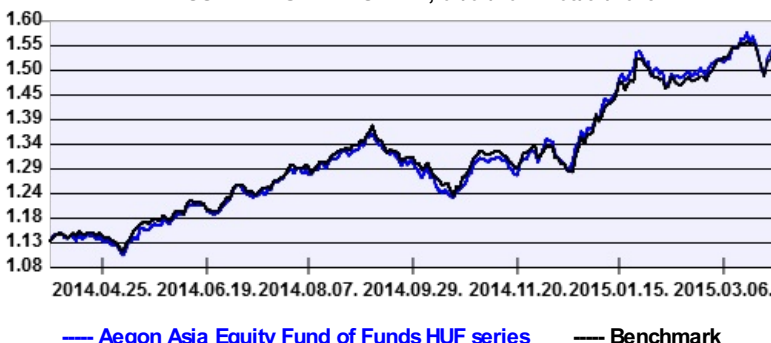

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

Equity indices traded near all-time high levels throughout March. Regardless of the stalling Greek debt talks, European markets once again registered strong performances. The risk-on environment was boosted by benign earnings revisions stemming from low oil prices, the weakening of the EUR and supportive monetary conditions with the ECB expanding its bond purchase program. US equities, on the other hand, lagged behind European ones as corporate earnings trajectories were negatively affected by adverse FX effects and oil related downward revisions. Oil prices remained volatile in March as a massive downscale in US drilling activity acted as a mid-term supportive factor, however, WTI remained under pressure on storage capacity concerns.

At the end of March the Chinese government loosened mortgage rules in the property market in order to relax the downturn in the property market. In addition to this the Chinese regulator allowed mainland mutual funds to invest in Hong Kong stocks via the stock connect program. Chinese equity markets benefitted from both measures.

ASSET ALLOCATION OF THE FUND ON 03/31/2015
