INVESTMENT POLICY OF THE FUND:

The fund is intended to serve as a stable, moderately low-risk form of investment, and to offer investors higher returns than bank deposits over the medium term. The portfolio elements are selected in accordance with the above principles. To ensure liquidity, the fund primarily aims to hold bonds and discount treasury bills issued by the State Debt Management Centre on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary. The fund has a low risk profile, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to yield a higher return than government securities. The fund may also keep its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Domestic Bond Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

March brought some weakness to the Hungarian government bond market as USD gained further strength and US 10 year bonds hit new YTD highs. Although we experienced several weak auctions in early March both for short and long papers, the mid-month spike in yields supported demand at auctions later as the 10 year yield went up to 3,65% early March, but closed the month around 3,3% as USD pressure faded and the Fed communication became more dovish. All in all, we saw a bit of a steepening of the Hungarian yield curve. The weakening of mid-month also affected the course of EURHUF as it depreciated to 307,35. After the 15 bps rate cut announcement, EURHUF surprisingly gained momentum and went down to 300 breaking down to levels we haven't seen since early 2014. The improvement in sentiment was due to a halt in USD rally and a decline in USD yields driven by less hawkish Fed comments.
