Total Net Asset Value of the whole Fund:	677,212 EUR
Net Asset Value of EUR series:	677,212 EUR
Net Asset Value per unit:	0.993157 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

Annualized standard deviation of the fund's weekly yields: 0.11 %
Annualized standard deviation of the benchmark's weekly yields: 0.02 %

MARKET SUMMARY:

March kicked off with the ECB starting its QE. Even though most details were revealed before the actual start, there was a bit of a market nervousness going into the meeting concerning how committed the council is to QE. In the meantime, investor sentiment became a bit shaky after strong employment numbers emerged from the other side of the Atlantic, and expectations of an earlier lift-off of the Fed funds rate have shifted more to June. In accordance with that strong dollar became the driver of the markets, the greenback went from 1,12 to 1,06 against the euro by the middle of the month. These factors coupled with the slowing growth in China had their toll on sentiment, which was then reversed after Fed chair, Janet Yellen expressed that interest rate hikes only can take a gradual path as the economy is still very vulnerable. Turning to markets, the clear winner in the bond world in Europe was the Bund and the 10-year UK government bond. USD denominated sovereign EM bonds posted 0,46% performance, while corporates managed to reach a bit higher 0,76% performance.
