Value of the whole Fund:	11,362,966,089 HUF
Net Asset Value of EUR series:	1,270,508 EUR
Net Asset Value per unit:	4.100224 EUR

INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

Risk and Reward Profile:

MARKET SUMMARY:

Equity indices traded near all-time high levels throughout March. Regardless of the stalling Greek debt talks, European markets once again registered strong performances. The risk-on environment was boosted by benign earnings revisions stemming from low oil prices, the weakening of the EUR and supportive monetary conditions with the ECB expanding its bond purchase program. US equities, on the other hand, lagged behind European ones as corporate earnings trajectories were negatively affected by adverse FX effects and oil related downward revisions. Oil prices remained volatile in March as a massive downscale in US drilling activity acted as a mid-term supportive factor, however, WTI remained under pressure on storage capacity concerns.

All CEE indices increased in March, but the Hungarian equity market strengthened the most boosted by OTP share price. Purchasing manager indices in the region remained at a high level, which signals the improving business conditions in the sector. Polish equity market rose in March and it should continue to perform well supported by low oil prices, strong PMI data, low loan cost and supportive fiscal and monetary policy. Oil and gas, food and IT sectors performed the best, however, telecoms closed the month in the negative territory.
