Total Net Asset Value of the whole Fund:	88,254,374 PLN
Net Asset Value of institutional series:	51,162,994 PLN
Net Asset Value per unit:	1.241236 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 12.37 %
Annualized standard deviation of the benchmark's weekly yields: 12.58 %

MARKET SUMMARY:

Equity indices traded near all-time high levels throughout March. Regardless of the stalling Greek debt talks, European markets once again registered strong performances. The risk-on environment was boosted by benign earnings revisions stemming from low oil prices, the weakening of the EUR and supportive monetary conditions with the ECB expanding its bond purchase program. US equities, on the other hand, lagged behind European ones as corporate earnings trajectories were negatively affected by adverse FX effects and oil related downward revisions. Oil prices remained volatile in March as a massive downscale in US drilling activity acted as a mid-term supportive factor, however, WTI remained under pressure on storage capacity concerns.

Polish equity market rose in March, and it should continue to perform well supported by low oil prices, strong PMI data, low loan cost and supportive fiscal and monetary policy. Oil and gas, food and IT sectors performed the best, however, telecoms closed the month in the negative territory.
