Net Asset Value of HUF series:	2,148,132,050 HUF
Net Asset Value per unit:	1.944330 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

MARKET SUMMARY:

April did not bring any development in the Greek-saga: Syriza, the leading Greek party could not come to a common ground with the IMF on the question of further fiscal austerity, which would be the prerequisite of the next trench of the bail-out money. After the conference of EU finance ministers in Riga, Yanis Varoufakis was at the cross-hairs of much criticism which lead Alexis Tsipras to replace the Greek finance minister. Even though that the replacement was an obvious sign of the effort from Greece, negotiations remained stalled. Meanwhile, disappointing labour market data emerged from the USA, which drove the 10-year government bond down by 10 basispoints. Oil was able to increase in the months, Brent was up by 14,8%, while WTI increased by 15,2%. The developments on the developed markets and recent surge in the price of energy have supported emerging market bonds. Core yields went up by a small margin during the month overall. The US 10-year government bond yield increased by 6 basispoints, its German counterpart started the month at 0,16% and ended it at 0,36%. Periphery yields saw some increase as well, as Italian yields went up by 23 basispoints, while Spanish yields ended the month 26 basispoints higher.
