Net Asset Value of PLN series:	140,136,209 PLN
Net Asset Value per unit:	2.274902 PLN

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Emerging markets ex China corrected though, but DM equity markets were simply range trading in the month.

Bond yields seem to have bottomed though, bringing meaningful rises in long-term bond yields in the US, Germany, and the European periphery. The dollar stuck in a fairly wide range opening the way for a meaningful short term rally in the euro.

Equity weight was around 10-25%. In this period of correction we selected low beta stocks. We kept positions against the HUF (eur, ron, try) which moved in a 10-20% range. In terms of fixed income assets we keep lower duration than average.

## ASSET ALLOCATION OF THE FUND ON 05/31/2015

Asset type	Weight
Corporate bonds	34.57 %
Government bonds	17.91 %
