INVESTMENT POLICY OF THE FUND:

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

MARKET SUMMARY:

Emerging markets ex China corrected though, but DM equity markets were simply range trading in the month.

Bond yields seem to have bottomed though, bringing meaningful rises in long-term bond yields in the US, Germany, and the European periphery. The dollar stuck in a fairly wide range opening the way for a meaningful short term rally in the euro.

The fund's risk exposure was only a fraction of the long-term target in May. It does not mean that we are expecting any significant equity market downturn, but current trends simply don't justify oversized positions. We are still positive on the equity markets though.
