Net Asset Value of PLN series:	6,741,167 PLN
Net Asset Value per unit:	0.916946 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	37.95 %
Annualized standard deviation of the benchmark's weekly yields:	38.03 %

MARKET SUMMARY:

Emerging markets ex China corrected though, but DM equity markets were simply range trading in the month.

Bond yields seem to have bottomed though, bringing meaningful rises in long-term bond yields in the US, Germany, and the European periphery. The dollar stuck in a fairly wide range opening the way for a meaningful short term rally in the euro.

The outstanding performance of the Russian market continued in the first half of May, then started to correct in the second half. Ruble plunged almost 7% as CBR started to purchase hard currency again and crude oil price slumped from mid-May's highs. Sector performance was mixed, oil sector declined in-line with oil price, while steel names managed to increase on excellent Q1 results and better dividend outlook. We cut back our overweight positions within oil sector and switched to more defensive names.

ASSET ALLOCATION OF THE FUND ON 05/31/2015
