Currency:	EUR
Total Net Asset Value of the whole Fund:	8,487,222 EUR
Net Asset Value of EUR series:	4,451,224 EUR
Net Asset Value per unit:	0.009735 EUR

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 15.99 %  
Annualized standard deviation of the benchmark's weekly yields: 16.68 %

## MARKET SUMMARY:

Greek debt negotiations were in the limelight in June. Investors focused on the volatile newsflow changing day by day inducing substantial market fluctuations, particularly in European indices. As Greek debt negotiations stalled, European indices were hit hard underperforming US markets. Following stellar performances YTD, the tide turned in Chinese equities as indices took a dive in June from massively overbought and not so cheap territories. The ongoing slowdown in China macro prospects weighed on industrial metals, particularly Nickel and Copper.

Climate change related equities were under pressure amid the risk-off environment. Alternative energy registered the steepest losses, while utilities and agriculture related equities proved to be more resilient.

## ASSET ALLOCATION OF THE FUND ON 06/30/2015
