Net Asset Value of HUF series:	5,638,868,760 HUF
Net Asset Value per unit:	1.609044 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide investors with yields higher than those attainable in the money market, at low risk, through the purchase or sale of securities. The fund invests most of its available assets in domestic discount treasury bills and short-term government bonds - which have the purpose of protecting the investors' capital - while using the rest to purchase riskier instruments on spot and futures markets. Given its approach to the purchase of risky instruments, the fund falls into the category of absolute-return funds: it selects, from among the opportunities available in the domestic and international money and capital markets, the investments with the best expected yield/risk ratio. The fund management company, exercising all due care, based on its own judgement and decisions and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with the our expectations with regard to future risks and returns - achieves its objective in the long term. The Fund offers capital protection for first trading day of every year under special condition. The capital protection is ensured by the investment policy of the Fund. Aegon Ózon Capital Protected Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	0.56 %
Annualized standard deviation of the benchmark's weekly yields:	0.28 %

MARKET SUMMARY:

On 23 June, the NBH cut the base rate by another 15 bps to 1.5%. The NBH's easing cycle may be nearing its end as the latest Inflation report identified more risk scenarios requiring tighter monetary conditions. However, the NBH's messaging of further slight easing points to one or two more rate cuts, this puts the terminal policy rate at 1,3-1,4%. In addition, the central bank announced at the beginning of June that it will amend the monetary tools: there will be a cap on 2-week deposits (gradually decreased to 1000 bln HUF), which will be auctioned starting October this year and the main policy instrument will be transformed to three-month deposit (unlimited amount). Moreover, the NBH will "strongly encourage" domestic banks to buy governments securities, generating new demand for Hungarian bonds (FSB will accelerate plans to increase the regulatory minimum LCR). The rationale is to reduce the balance sheet of the central bank, driving the liquidity of banks onto the fixed income market and reducing the fx-proportion of government debt. As a result, Hungarian money market yields plunged again, reaching 1% for all maturities of HTBs.

ASSET ALLOCATION OF THE FUND ON 06/30/2015
