Currency:	HUF
Total Net Asset Value of the whole Fund:	8,562,461 EUR
Net Asset Value of HUF series:	1,316,704,817 HUF
Net Asset Value per unit:	1.281140 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Major developed equity markets fluctuated in July without clear trends. Fears of a Greek default eased throughout the month as investors once again focused on China slowdown concerns marked by particularly weak manufacturing and consumption data as well as a meltdown in Chinese equity markets. The dismal China newsflow weighed on emerging indices which lagged behind developed ones. The US earnings season painted a mixed picture as several leaders of the rally published softening guidances. Commodity prices remained under pressure due to the ongoing slowdown in China macro prospects. Crude oil prices tumbled on the unfortunate mix of sluggish China macro data, the peaking of the driving season and the Iranian nuclear deal, which may add to the supply glut.

Climate change related equities performed mixed in July. Alternative energy was hit by lower oil prices, while water and waste related companies outperformed.

ASSET ALLOCATION OF THE FUND ON 07/31/2015
