Total Net Asset Value of the whole Fund:	816,548 EUR
Net Asset Value of EUR series:	816,548 EUR
Net Asset Value per unit:	0.995910 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

MARKET SUMMARY:

With growth concerns and falling equity prices in China global commodity prices (especially oil and precious metals) came under severe pressure altering global inflation expectations significantly. In Europe favorable supply/demand technicals (huge redemptions versus moderate issuance plus ongoing QE) fueled the bond rally, while in US we haven't got any strong signal regarding an eventual lift-off in September, that coupled with mixed data and a very weak employment cost index at the end of the month that was a further catalyst for a sharp decrease in bond yields. The USD denominated sovereign bonds posted a monthly return of 0.4%, in comparison with the total returns of +0.5% and -0.2% posted by US IG and US HY, respectively, during the same month. After a couple of very quiet months for the primary markets in EM, a number of sovereign issuers came to the market in July. EUR denominated bonds outperformed USD denominated bonds as Grexit or Graccedent has been avoided. After Greece, focus shifted somewhat towards Croatia as S&P downgraded its outlook on the countries foreign debt on deteriorating fundamentals and the fiscal uncertainty around the upcoming elections.
