Total Net Asset Value of the whole Fund:	836,654 EUR
Net Asset Value of EUR series:	836,654 EUR
Net Asset Value per unit:	0.997683 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

Annualized standard deviation of the fund's weekly yields: 0.06 %
Annualized standard deviation of the benchmark's weekly yields: 0.01 %

MARKET SUMMARY:

EM bonds also did well in October with the broad market EM bond index showing its best monthly performance this year. Fears around China have abated somewhat as freshly published macro data have shown some improvement comparing to analyst expectations. It is not surprising that this coincided with a somewhat better tone in commodities. The market started to think of the Fed rate hike as an event to happen in 2016. Altogether mood was supportive for EM hard currency bonds for the main part of the month until the statement from the October Fed meeting was published, in which Janet Yellen, chair highlighted that based on their assessment the US economy is in a state which might allow a Fed rate hike in December. This deteriorated the mood somewhat, but impacted the month-to-date returns only marginally. EM hard currency sovereign bond spreads have tightened significantly from the level of 476 basispoints at the start of the month to 420 basispoints until the end of October.
