## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 2.05 %  
Annualized standard deviation of the benchmark's weekly yields: 0.28 %

## MARKET SUMMARY:

As the certainty of the December Fed rate hike increases, investors are getting more focused on the dynamics of the rate hike cycle. It is emphasized by the decision makers of the Fed that the interest rate will be raised gradually. Therefore, 10 year US bond yields dropped by nearly 20 basis points during November, and US equities also performed well for the second half of the month. Market sentiment is also fueled by the prospective easing by the ECB, driving Bund yields lower and weakening EUR against USD. Accordingly, DAX turned out one of the best-performing equity indices by the end of the month. The Fund went long DAX and long HUF versus EUR, and realized profit on its EURSEK short position. The upcoming month seems eventful, as interest rate decisions are expected by both the Fed and the ECB. Actually, the Fund holds only a few active bets, while "in European equities, we trust".

## ASSET ALLOCATION OF THE FUND ON 11/30/2015
