Net Asset Value of HUF series:	5,885,416,821 HUF
Net Asset Value per unit:	1.615696 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide investors with yields higher than those attainable in the money market, at low risk, through the purchase or sale of securities. The fund invests most of its available assets in domestic discount treasury bills and short-term government bonds - which have the purpose of protecting the investors' capital - while using the rest to purchase riskier instruments on spot and futures markets. Given its approach to the purchase of risky instruments, the fund falls into the category of absolute-return funds: it selects, from among the opportunities available in the domestic and international money and capital markets, the investments with the best expected yield/risk ratio. The fund management company, exercising all due care, based on its own judgement and decisions and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with the our expectations with regard to future risks and returns - achieves its objective in the long term. The Fund offers capital protection for first trading day of every year under special condition. The capital protection is ensured by the investment policy of the Fund. Aegon Ózon Capital Protected Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	0.35 %
Annualized standard deviation of the benchmark's weekly yields:	0.28 %

MARKET SUMMARY:

Short term yields continued to increase in November with modest dynamics. The 3 month reference yield increased by 5 basis points to 79 bp month end. However, yields stabilized and slightly decreased from their monthly high by the end of November. Demand for Treasury bills remained persistently low. Thus, the decrease of the 3 month yields was a result of the actions of the GDMA, as it cut both offered and accepted auction volumes lower. Meanwhile, 3 liquidity auctions were announced, generating significantly larger demand, but similarly ending up with a high average yield level between 1-1.08%. Notwithstanding the decreased auction volumes, 12 month treasury bill auctions closed with the lowest coverage, resulting in a maximum yield over 1% at the last auction of November. Meanwhile, the NBH indicated that it is ready for taking additional non-conventional monetary policy actions, targeting the long-end of the yield curve to moderate its steepness.

ASSET ALLOCATION OF THE FUND ON 11/30/2015
