Start:	07/16/2013
Currency:	HUF
Total Net Asset Value of the whole Fund:	29,706,708,750 HUF
Net Asset Value of R series:	1,245,493,235 HUF
Net Asset Value per unit:	1.131735 HUF

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

MARKET SUMMARY:

The end of 2015 for the bond markets was not a success story, as most instruments in the asset class had negative performance in December. The last month of the year was eagerly awaited as the ECB and the FED both held interest rate decision meetings. As the ECB could not meet the market expectations induced by itself, the FED successfully conducted the first rate hike in the US since 2006, without triggering highly volatile movements on the market. Meanwhile, fuel prices continued their fall as the WTI dropped by 11.1% and Brent devaluated by 17.6%. USD denominated emerging market bonds fell by 1.39% during the last month of the year, thus tempering their full year return to +1.18%. The Fund only opened tactical positions during December. These positions included a new EUR denominated Latvian government bond issue, offered with an attractive yield premium. This latter position was closed after realizing profit soon after the purchase.

ASSET ALLOCATION OF THE FUND ON 12/31/2015
