Net Asset Value of HUF series:	56,924,173,436 HUF
Net Asset Value per unit:	2.545737 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Equity markets mirrored crude oil movements in February starting the month with a steep selloff. Regardless of the swelling inventories, crude oil managed to recover from decade-lows during the second half of the month supported by the newsflow of huge E&P capex cutbacks and a forming production freeze agreement among OPEC members and Russia. European banks were hit hard on fears of profitability issues and low oil prices triggering provisions. European indices once again lagged behind the S&P500 in February regardless of the somewhat healthier macro prospects. Precious metals kept surging in the risk-off environment, industrial metals managed to recover during the second half of the month.

Equity shorts were closed in the right time which contributed to the fund's performance positively. Furthermore, the fund held individual names from the region which also added to the performance.
