Net Asset Value of institutional series:	1,013,880,096 HUF
Net Asset Value per unit:	1.013119 HUF

INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 3.97 %

Annualized standard deviation of the benchmark's weekly yields: 0.27 %

MARKET SUMMARY:

Equity markets mirrored crude oil movements in February starting the month with a steep selloff. Regardless of the swelling inventories, crude oil managed to recover from decade-lows during the second half of the month supported by the newsflow of huge E&P capex cutbacks and a forming production freeze agreement among OPEC members and Russia. European banks were hit hard on fears of profitability issues and low oil prices triggering provisions. European indices once again lagged behind the S&P500 in February regardless of the somewhat healthier macro prospects. Precious metals kept surging in the risk-off environment, industrial metals managed to recover during the second half of the month.

As correction of global equity markets continued in the first half of the month, Maraton Fund also started the month in negative territory. The fund maintained their short positions in the first 2 weeks to hedge the individual stocks. In the second half of February, we closed the short positions and the fund managed to benefit from the rebound of equity markets. Our regional equity was mainly focused on Turkish and Russian equity markets, while we also opened shorter term positions on European equity markets.
