Net Asset Value of PLN series:	37,724,552 PLN
Net Asset Value per unit:	1.125242 PLN

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

Risk and Reward Profile:

MARKET SUMMARY:

Markets fell further for the first weeks of February, while changed their way to North by the middle of the month, driven by stabilizing crude prices. However, uncertainty remained elevated, with the outlook and developments of the global oil production in the focus of investors. China continued weakening the renminbi, while the United Kingdom announced that it is to hold a referendum on Brexit at the 23th of June. Following the announcement, GBP significantly weakened against key currencies. By the end of the month, sentiment slightly eased as investors started to look forward to the ECB's upcoming interest rate decision meeting of 10th March.

Negative sentiment related to global slowdown weighed on the performance of emerging market bonds in February. However, this market became dominated by buyers for the second half of the month. Our Fund bought less risky Lithuanian bonds and increased its Hungarian exposure, along with the holdings in MOL and the largest Polish insurer, PZU. The Fund also purchased some of the newly issued Euro-denominated 10-year Romanian govies at the auction.
