Net Asset Value of HUF series:	1,983,390,705 HUF
Net Asset Value per unit:	1.334874 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

The upward correction went on in March as equity indices were supported by the stabilization of commodities and particularly oil markets. However, the strong correlation between equity and oil somewhat deteriorated during the second half of the month. Oil prices did not manage to stay above the USD 40 levels due to profit taking and the mixed newsflow regarding the production freeze within the OPEC. Industrial commodities like copper and iron ore soared in March, while gold prices eased with the return of the risk-on environment.

March brought some relief on Asian equity markets and most equity indices were advancing in the period. Japan equities suffered as yen strengthened further, but managed to remain in positive territory. Japanese PMI fell below the 50 threshold level and it is the weakest reading since April 2015 due to steep fall in export orders.

ASSET ALLOCATION OF THE FUND ON 03/31/2016

Asset type	Weight
Collective securities	92.19 %
Current account	8.07 %
Liabilities	-0.12 %
