Total Net Asset Value of the whole Fund:	960,954 EUR
Net Asset Value of EUR series:	960,954 EUR
Net Asset Value per unit:	0.999874 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

MARKET SUMMARY:

This month was mainly about big central banks, again. Eurozone QE adjusted net supply was a large positive amount in March, that was the heaviest month of the year. In the first part of March, core market yields increased. On the 10th of March the ECB delivered an extended package of easing measures. The refinancing rate, the marginal lending rate and the deposit rate were all cut. Liquidity measures were rather aggressive with a new set of 4 TLTROs with a maturity of 4 years and an interest rate that can be negative. The monthly pace of asset purchases was raised to EUR 80bn and IG non-bank corporate debt will be included in the program. Risk sentiment deteriorated when Draghi downplayed the prospect of further rate cuts, however, this program is still very supportive for fixed income assets. On the 16th of March the Fed held the regular FOMC meeting. The outcome was quite dovish: rates were unchanged, Fed fund futures continued pricing 1 rate hike this year, after Fed's updated "dot plot" showed Fed expecting 2 rate hikes in 2016 (the FOMC members' median interest rate projections have come down by 50bps for both 2016 and 2017). The FOMC statement unexpectedly highlighted the risks from global economic and financial market developments more prominently. FOMC developments coupled with very dovish comments from Yellen were very supportive for risk assets in the near term and the short-lived sell-off on core bond markets proved to be a better entry level for long positioning.

ASSET ALLOCATION OF THE FUND ON 03/31/2016

Asset type	Weight
Government bonds	42.01 %
Corporate bonds	20.92 %
Current account	37.57 %
Liabilities	-0.36 %
