Total Net Asset Value of the whole Fund:	3,762,821,545 HUF
Net Asset Value of PI series:	82,748 PLN
Net Asset Value per unit:	0.827476 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	36.93 %
Annualized standard deviation of the benchmark's weekly yields:	36.71 %

MARKET SUMMARY:

The upward correction went on in March as equity indices were supported by the stabilization of commodities and particularly oil markets. However, the strong correlation between equity and oil somewhat deteriorated during the second half of the month. Oil prices did not manage to stay above the USD 40 levels due to profit taking and the mixed newsflow regarding the production freeze within the OPEC. Industrial commodities like copper and iron ore soared in March, while gold prices eased with the return of the risk-on environment.

In the first half of the month, Russian equities continued to increase as oil and ruble gained again. After the sharp rebound of global steel prices, the Russian steel sector showed the best performance, maintained their positive trend for the whole month. Macro background improved somewhat as PMI figures rose in March and inflation continued to decline. In the second half of the month we cut back our overweighted positions as we see some risk of short term correction.

ASSET ALLOCATION OF THE FUND ON 03/31/2016
