Net Asset Value of HUF series:	58,708,829,248 HUF
Net Asset Value per unit:	2.560596 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Equity markets fluctuated throughout April closing the month practically flat. The rally started in February lost some steam in mid-April on mixed macro newsflow and profit taking. The US earnings season delivered mixed results with revenues trailing behind the consensus, while bottom line data once again surpassed analyst expectations. The USD was under pressure as the FED once again postponed its rate hike. Commodities, on the other hand, were supported by the weakening USD, particularly precious metals surging to multi-year highs. Regardless of the unsuccessful Doha meeting on production freeze, oil prices kept rallying for the most part of the month.

Alfa closed the month in negative territory. Regional equity exposure underperformed during the month. We expect a bear market rally, therefore we increased the number of short positions gradually.
