Net Asset Value of HUF series:	1,933,785,513 HUF
Net Asset Value per unit:	1.305414 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 24.13 %
Annualized standard deviation of the benchmark's weekly yields: 22.17 %

MARKET SUMMARY:

Equity markets fluctuated throughout April closing the month practically flat. The rally started in February lost some steam in mid-April on mixed macro newsflow and profit taking. The US earnings season delivered mixed results with revenues trailing behind the consensus, while bottom line data once again surpassed analyst expectations. The USD was under pressure as the FED once again postponed its rate hike. Commodities, on the other hand, were supported by the weakening USD, particularly precious metals surging to multi-year highs. Regardless of the unsuccessful Doha meeting on production freeze, oil prices kept rallying for the most part of the month. Asian equity markets started the second quarter weakly and Japanese equity market suffered the most on weak macro data. There was a small raise in the middle of April on better Chinese macro data, however, Asian equity markets closed the month in negative territory. Against expectations BoJ did not announce further easing measures in the end of April, yen reacted on the news with heavy appreciation, while equity market fell sharply.
