Net Asset Value of HUF series:	33,848,086,228 HUF
Net Asset Value per unit:	5.029076 HUF

INVESTMENT POLICY OF THE FUND:

The fund is intended to serve as a stable, moderately low-risk form of investment, and to offer investors higher returns than bank deposits over the medium term. The portfolio elements are selected in accordance with the above principles. To ensure liquidity, the fund primarily aims to hold bonds and discount treasury bills issued by the State Debt Management Centre on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary. The fund has a low risk profile, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to yield a higher return than government securities. The fund may also keep its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk. Aegon Domestic Bond Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

MARKET SUMMARY:

Hungarian macro data was slightly mixed in April as PMI and industrial production figures published were weaker than expected. Yet, retail sales growth remains strong and the leading HUBE, an indicator published by ING, also pointed higher. Late in April, surprisingly, central bank communications turned less dovish as the NBH envisions a smaller total rate cut cycle than expected by the market. Stricter communication was also confirmed by Márton Nagy, Vice President of the NBH, deeming previous expectations exaggerated. The NBH also indicated its intention to terminate its IRS tender program. In the last days of the month, the Ministry of National Economy announced significant new measures, anticipating a much more expansive fiscal policy for 2017, which would lead to a sharp turnaround compared to the previous policy mix. Next year's budget seems to be relaxed in terms of fiscal discipline, indicating higher deficit and deteriorating primary balance. The change in the monetary and fiscal policy stance resulted in significant profit taking particularly in the long end of the curve. The yield curve shifted upwards by approximately 10-35 bps along the maturities from 3 to 10 years. Auction demand remained strong throughout the month, though.
