Net Asset Value of HUF series:	2,314,970,498 HUF
Net Asset Value per unit:	1.065103 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Equity markets fluctuated throughout April closing the month practically flat. The rally started in February lost some steam in mid-April on mixed macro newsflow and profit taking. The US earnings season delivered mixed results with revenues trailing behind the consensus, while bottom line data once again surpassed analyst expectations. The USD was under pressure as the FED once again postponed its rate hike. Commodities, on the other hand, were supported by the weakening USD, particularly precious metals surging to multi-year highs. Regardless of the unsuccessful Doha meeting on production freeze, oil prices kept rallying for the most part of the month. Polish equity market closed the month in negative territory. Retail stocks were one of the few which managed to gain in April thanks to the new retail tax proposal which is generally better than the previous draft bill. Macro picture worsened somehow. Despite better PMI data, industrial production and inflation declined further.
