Net Asset Value of institutional series:	3,179,515,433 HUF
Net Asset Value per unit:	1.005369 HUF

## INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

## MARKET SUMMARY:

Most asset classes traded in a narrow range during May. American macro data saw some stabilisation this month after the weak Q1 and Fed speakers took the opportunity to be more optimistic about a summer rate hike. The USD appreciated in response and treasury yields also edged higher. Despite oil appreciating further to the 50 levels emerging market assets got weaker on the stronger USD and pending US rate hikes. In the credit subportfolio we purchased from the new MOL issue while decreasing some of our regional sovereign holdings (Lithuania, Slovenia). After the selloff in Hungarian local bonds we bought some short-end papers. We opened a US 10y short position given the improving US data and the flat yield curve and also opened a small short position in US equities. Momentum of the EM equity rally is slowing, we also started to build short positions amid a stronger USD and topping oil.
