Net Asset Value of institutional series:	1,463,566,057 HUF
Net Asset Value per unit:	1.954899 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	36.95 %
Annualized standard deviation of the benchmark's weekly yields:	36.76 %

MARKET SUMMARY:

High volatility characterized the equity market in June due to the fact that the British referendum triggered uncertainty in the market. After the win of the Leave campaign, major indices collapsed without exception. However in the end of the month indices rebounded a bit from the lows but were not able to close in the black. Oil soared in the beginning of the month, although OPEC negotiations were unsuccessful, mainly because of the supply problems and rise of the demand. However oil lost its momentum in the second half of the month due to Brexit effects on dollar and risk aversion. For this reason oil close the month particularly flat. FED postponed its rate hike again as fears over weaker labour market information and Brexit. As a result of increasing uncertainty, both precious and industrial metals price skyrocketed. Russian equity market was the top performer in June out of regional equity markets. Oil related stocks led the rise.

ASSET ALLOCATION OF THE FUND ON 06/30/2016
