Net Asset Value of HUF series:	2,027,547,598 HUF
Net Asset Value per unit:	1.429255 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

MARKET SUMMARY:

Thanks to the expected monetary, fiscal stimulus and the positive change from previously pessimistic equity positions, equity markets soared in July after post-Brexit sell-off. Investors hope for further easing from Bank of England and the ECB, even though right now central banks rather wait for post-Brexit data. According to analyst consensus the probability of FED rate hike in September and December declined in the period. While in Japan significant monetary and fiscal stimulus is expected from the cooperation of government and central bank to boost struggling economy. Equities rally is also supported by US corporate earnings season reports as results of both revenues and net income outperformed pessimistic analysts expectations. The gain was led by the tech companies and except for the oil sector, all industries experienced positive results. For this reason the US equity market broke its all-time high levels several times. In July oil prices were declined because of the rising supply expectations and expected export growth in China and Libya.

The Asian market rally was in parallel with the global equity market tendencies in July. Indices in the region increased with no exception. The Japanese was the best-performing market as a result of improved sentiment caused by the announced monetary and fiscal stimulus packages, while the Pokemon Go craze also strengthened the market.

ASSET ALLOCATION OF THE FUND ON 07/31/2016

Asset type	Weight
