INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Thanks to the expected monetary, fiscal stimulus and the positive change from previously pessimistic equity positions, equity markets soared in July after post-Brexit sell-off. Investors hope for further easing from Bank of England and the ECB, even though right now central banks rather wait for post-Brexit data. According to analyst consensus the probability of FED rate hike in September and December declined in the period. While in Japan significant monetary and fiscal stimulus is expected from the cooperation of government and central bank to boost struggling economy. Equities rally is also supported by US corporate earnings season reports as results of both revenues and net income outperformed pessimistic analysts expectations. The gain was led by the tech companies and except for the oil sector, all industries experienced positive results. For this reason the US equity market broke its all-time high levels several times. In July oil prices were declined because of the rising supply expectations and expected export growth in China and Libya.

Central European markets had an excellent month in July as all the main indices achieved profits in the region, thanks to the improved sentiment. Moreover CEE equity market outperformed MSCI Emerging Market Index. The Czech market was the best regional performer, while the Polish stocks earned the least return.

ASSET ALLOCATION OF THE FUND ON 07/31/2016

| Asset type | Weight |
