Total Net Asset Value of the whole Fund:	127,930,398 PLN
Net Asset Value of institutional series:	95,778,034 PLN
Net Asset Value per unit:	1.058399 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Thanks to the expected monetary, fiscal stimulus and the positive change from previously pessimistic equity positions, equity markets soared in July after post-Brexit sell-off. Investors hope for further easing from Bank of England and the ECB, even though right now central banks rather wait for post-Brexit data. According to analyst consensus the probability of FED rate hike in September and December declined in the period. While in Japan significant monetary and fiscal stimulus is expected from the cooperation of government and central bank to boost struggling economy. Equities rally is also supported by US corporate earnings season reports as results of both revenues and net income outperformed pessimistic analysts expectations. The gain was led by the tech companies and except for the oil sector, all industries experienced positive results. For this reason the US equity market broke its all-time high levels several times. In July oil prices were declined because of the rising supply expectations and expected export growth in China and Libya.

Equity markets in the CEE region increased massively during the month but the Polish market was not able to utilize the positive sentiment as well as the other regional countries. Although it still closed in the black, with the exception of the bank and oil sector, all the other industry achieved profits in July, led by the food and energy sector. Polish macro had positive developments as industrial production and retail sales showed improving tendency. Moreover unemployment rate closing to the eight-year low.
