Net Asset Value of HUF series:	4,433,106,494 HUF
Net Asset Value per unit:	1.266375 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Thanks to the expected monetary, fiscal stimulus and the positive change from previously pessimistic equity positions, equity markets soared in July after post-Brexit sell-off. Investors hope for further easing from Bank of England and the ECB, even though right now central banks rather wait for post-Brexit data. According to analyst consensus the probability of FED rate hike in September and December declined in the period. While in Japan significant monetary and fiscal stimulus is expected from the cooperation of government and central bank to boost struggling economy. Equities rally is also supported by US corporate earnings season reports as results of both revenues and net income outperformed pessimistic analysts expectations. The gain was led by the tech companies and except for the oil sector, all industries experienced positive results. For this reason the US equity market broke its all-time high levels several times. In July oil prices were declined because of the rising supply expectations and expected export growth in China and Libya.
