Total Net Asset Value of the whole Fund:	4,382,512,076 HUF
Net Asset Value of institutional series:	1,531,969,674 HUF
Net Asset Value per unit:	1.973439 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	36.85 %
Annualized standard deviation of the benchmark's weekly yields:	36.69 %

MARKET SUMMARY:

Thanks to the expected monetary, fiscal stimulus and the positive change from previously pessimistic equity positions, equity markets soared in July after post-Brexit sell-off. Investors hope for further easing from Bank of England and the ECB, even though right now central banks rather wait for post-Brexit data. According to analyst consensus the probability of FED rate hike in September and December declined in the period. While in Japan significant monetary and fiscal stimulus is expected from the cooperation of government and central bank to boost struggling economy. Equities rally is also supported by US corporate earnings season reports as results of both revenues and net income outperformed pessimistic analysts expectations. The gain was led by the tech companies and except for the oil sector, all industries experienced positive results. For this reason the US equity market broke its all-time high levels several times. In July oil prices were declined because of the rising supply expectations and expected export growth in China and Libya. Russian market started the month strongly thanks to the rising steel and commodity sectors, even though its momentum did not last until the end of the month. For this reason and because of the correction in the oil sector the fund dropped its solid start a bit by the end of July.
