Currency:	HUF
Total Net Asset Value of the whole Fund:	5,789,089 EUR
Net Asset Value of HUF series:	1,148,558,619 HUF
Net Asset Value per unit:	1.214935 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

Risk and Reward Profile:

MARKET SUMMARY:

The last month of summer was pretty eventless. Equity markets continued their strong performance in August combined with extreme low market volatility. US equity indices pushed to new all-time highs again. For this reason and because of the improving macroeconomic data, FED central bankers suggested that the question of tighter monetary policy became more relevant to US economy. As a result, the probability of this year FED rate hike increased to the highest level in the summer. Investors already pay attention to events in September when central banks will make decisions about the direction of their monetary policy. This month was a good one for oil as closing short positions and news about the future OPEC meeting in September had favorable effects on its price. The main topic of the OPEC negotiation will be about a possible oil production freeze again. Climate change related sectors achieved mixed results in August. The agriculture sector was performed well in the portfolio, while alternative energy lagged behind.
