Net Asset Value of HUF series:	4,350,643,983 HUF
Net Asset Value per unit:	1.252139 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The last month of summer was pretty eventless. Equity markets continued their strong performance in August combined with extreme low market volatility. US equity indices pushed to new all-time highs again. For this reason and because of the improving macroeconomic data, FED central bankers suggested that the question of tighter monetary policy became more relevant to US economy. As a result, the probability of this year FED rate hike increased to the highest level in the summer. Investors already pay attention to events in September when central banks will make decisions about the direction of their monetary policy. This month was a good one for oil as closing short positions and news about the future OPEC meeting in September had favorable effects on its price. The main topic of the OPEC negotiation will be about a possible oil production freeze again.

The fund did not change its asset allocation materially during the month. Neutral equity weight was held in the fund, in which the banking sector was UW.

ASSET ALLOCATION OF THE FUND ON 08/31/2016
