Net Asset Value of HUF series:	4,604,566,070 HUF
Net Asset Value per unit:	1.628660 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide investors with yields higher than those attainable in the money market, at low risk, through the purchase or sale of securities. The fund invests most of its available assets in domestic discount treasury bills and short-term government bonds - which have the purpose of protecting the investors' capital - while using the rest to purchase riskier instruments on spot and futures markets. Given its approach to the purchase of risky instruments, the fund falls into the category of absolute-return funds: it selects, from among the opportunities available in the domestic and international money and capital markets, the investments with the best expected yield/risk ratio. The fund management company, exercising all due care, based on its own judgement and decisions and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with the our expectations with regard to future risks and returns - achieves its objective in the long term. The Fund offers capital protection for first trading day of every year under special condition. The capital protection is ensured by the investment policy of the Fund. Aegon Ozon Capital Protected Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	0.37 %
Annualized standard deviation of the benchmark's weekly yields:	0.32 %

MARKET SUMMARY:

The trend of falling money market yields continued further in August. The tendency is still driven by the NBH's measure to reduce the number of 3-month depo auctions will be reduced to only one per month. Additionally, the auctions' size are going to be capped by October. Meanwhile, the extent of the cap remains uncertain. Auction yields dropped and demand remained strong in case of 3-month T-bills. The offered quantity on 3-month auctions remained equal to 20 billion HUF, while average auction yields were between 48 and 39 basis points, with bid to cover ratios between 2.3x-3.4x. As for the two 12-month T-bill auctions, offered amount remained 30 billion HUF, average yields per each auction were equal to 63 and 55 basis points, while bid cover ratios were 0.67x and 1.24x. Market participants strived to take the opportunity of the last uncapped 3-month NBH deposit auction, while those for whom this option is not available bought 3-month HTB. As a consequence, liquidity became scarce on the interbank market, thus short interbank rates jumped, leading to a difference of 30-40 bps between HTBs and BUBOR of various short maturities.

The 3-month reference yield decreased by 3 basis points to 47 basis points, while the 12-month reference yield remained unchanged at 61 basis points compared to the end of the previous month.
