Currency:	EUR
Total Net Asset Value of the whole Fund:	5,688,436 EUR
Net Asset Value of EUR series:	2,017,164 EUR
Net Asset Value per unit:	0.009268 EUR

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign equities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. In order to achieve its aim, the fund can hold collective investment vehicles and ETFs in its portfolio. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Main equity indices finished close to their previous month values in September as after a strong start equity markets' mood deteriorated. Central banks were mainly in focus during the month. Markets were not delighted with the announcement of ECB not extending its QE program. Investors expected further monetary easing from the central bank. Although decisions of FED and BoJ boosted market prices. FED acted in line with market expectations and postponed its rate hike in September, while BoJ announced that it holds its current accommodative monetary policy and introduced yield-targeting measures. US elections heated up with the first presidential debate, where according to the market Hillary Clinton performed well, therefore investors started to buy stocks. US Department of Justice wants Deutsche Bank to pay several billion dollars fine in connection with probe tied to mortgage-backed securities. For this reason its stocks were punished heavily, making banks the worst performing sector during the month. Oil had a great month in September as OPEC members surprisingly agreed to cut oil production. As a result oil prices approached \$50 level again. Climate change related sectors achieved mixed results in September. While water related stocks performed relatively well, agriculture sector lagged behind.
