Net Asset Value of HUF series:	4,758,031,034 HUF
Net Asset Value per unit:	4.202784 HUF

INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Main equity indices finished close to their previous month values in September as after a strong start equity markets' mood deteriorated. Central banks were mainly in focus during the month. Markets were not delighted with the announcement of ECB not extending its QE program. Investors expected further monetary easing from the central bank. Although decisions of FED and BoJ boosted market prices. FED acted in line with market expectations and postponed its rate hike in September, while BoJ announced that it holds its current accommodative monetary policy and introduced yield-targeting measures. US elections heated up with the first presidential debate, where according to the market Hillary Clinton performed well, therefore investors started to buy stocks. US Department of Justice wants Deutsche Bank to pay several billion dollars fine in connection with probe tied to mortgage-backed securities. For this reason its stocks were punished heavily, making banks the worst performing sector during the month. Oil had a great month in September as OPEC members surprisingly agreed to cut oil production. As a result oil prices approached \$50 level again.

Central European markets did not perform well during the month since apart from the Czech equities all the main region indices suffered from a drop. For this reason the region was not able to outperform MSCI Emerging Market Index. An important adjustment was carried out in the operation of the fund as from September 1 the fund changed its benchmark. Therefore Austrian market is now included in the benchmark, while weights of Romanian stocks were raised at the expense of Polish, Hungarian and South European equities.

ASSET ALLOCATION OF THE FUND ON 09/30/2016
