INVESTMENT POLICY OF THE FUND:

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Main equity indices finished close to their previous month values in September as after a strong start equity markets' mood deteriorated. Central banks were mainly in focus during the month. Markets were not delighted with the announcement of ECB not extending its QE program. Investors expected further monetary easing from the central bank. Although decisions of FED and BoJ boosted market prices. FED acted in line with market expectations and postponed its rate hike in September, while BoJ announced that it holds its current accommodative monetary policy and introduced yield-targeting measures. US elections heated up with the first presidential debate, where according to the market Hillary Clinton performed well, therefore investors started to buy stocks. US Department of Justice wants Deutsche Bank to pay several billion dollars fine in connection with probe tied to mortgage-backed securities. For this reason its stocks were punished heavily, making banks the worst performing sector during the month. Oil had a great month in September as OPEC members surprisingly agreed to cut oil production. As a result oil prices approached \$50 level again. Besides the existing slight underweight in the European banking sector, the fund also held US IT sector underweight during the month.
