Net Asset Value of CZK series:	302,275 CZK
Net Asset Value per unit:	1.007582 CZK

### INVESTMENT POLICY OF THE FUND:

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

### MARKET SUMMARY:

Equities did not close strongly in October as except for the Japanese market, main equity indices lost from their value. The increasing fear of FED rate hike and the risk aversion caused by the US presidential election did not support equities. The banking sector was the best performing industry in October as a result of rising interest rates and better-than-expected corporate earnings. The probability of FED rate hike in December escalated during the month and because of that USD was strong compared to major currencies in October. European Central Bank postponed its decision about the future of its QE program due to the fact that decision makers want to wait for the result of FED meeting in December. GBP was punished during the month since it seems like British government pursues a "hard Brexit", which means that Britons will not only leave EU, but also EU's single market in exchange for regaining better control of their immigration policy. Investors started to accommodate themselves to US presidential election at the end of the month by decreasing their risky assets. According to polls, Hillary Clinton has better chances to win the election, which would be a more pleasant outcome for equity markets. After starting strong, oil prices fell from their one-year highs thanks to OPEC, which backed out from its oil freezing agreement, and the strong USD. As a result, oil ended up in the negative territory in October.

The fund increased its equity exposure during the month, put greater emphasis on story stocks in the region, focusing mainly on banking, real estate and telecom sectors.
