Net Asset Value of PLN series:	138,740,945 PLN
Net Asset Value per unit:	2.349777 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

Risk and Reward Profile:

MARKET SUMMARY:

Equity markets bounced back after a weaker start, finishing in the black in November. US indices pushed to new all-time highs, Japanese market performed strongly because of the weakening yen and even though European indices were underperformers, they still achieved profit during the month. As a result of increasing yields and expected economic plan of the new US president, a powerful rotation took place among sectors. Banks and basic materials were the winners of the changed situation, while defensive sectors lagged behind. People voted for the new president in the US and surprisingly Donald Trump won the election. Before the vote, investors were afraid of a Trump win, but after the results they saw Trump's success in a different perspective. They started to like Trump's economic plan, in which the president-elect promised structural reforms and tax reduction. For this reason, investors began to buy equities. The expected monetary tightening made US yields to increase. Because of improving yields, favorable macro and Trump's expansionary policy, USD strengthened against most currencies. Precious metals prices plunged during the month thanks to the strong dollar and more risk-taking, while copper's price soared due to improving growth prospects. Oil prices were highly volatile during the month. The price of Brent oil fell to \$45, but eventually closed above the \$50 levels. Uncertainties around the OPEC agreement triggered the price. However, in the end OPEC was able to reach an agreement on the first output cut in eight years.

By reducing its equity exposure, the fund waited for the result of the US presidential election with a more defensive portfolio. Taking advantage of the selling wave, the fund increased back its equity weight after Trump's win. It bought mainly European banking and insurance sectors. After the end of the rally the fund sold some of these positions. Apart from that it raised its Russian and its region exposures. As a result of expected rising interest rates, the fund opened positions that would profit from increasing US and German yields. Also the fund closed two-thirds of its HUF long positions at 305 during the month.
